Software Engineer

Angular developer with **4 years** of experience specializing in **RxJS**, **NgRx**, and **TypeScript**. Building enterprise-grade B2B portals and high-frequency real-time data platforms from binary WebSocket pipelines to pixel-perfect UI.

SKILLS

- **Frontend:** Angular, TypeScript, JavaScript (ES6+), NgRx (Redux pattern), RxJS, HTML5, CSS3, LESS, BEM, Bootstrap CSS, Tailwind CSS, WebSockets, REST APIs, TradingView Charts, Figma, Postman, Electron, Playwright
- **DevOps:** Docker, Jenkins, Git, NPM, Gulp, GitHub Actions, CI/CD, DigitalOcean, Vercel
- **AI Tools:** Claude Code, GitHub Copilot, Cursor, Codex, Antigravity
- **Project Management:** Agile, Scrum, Jira, Sprint Planning

WORK EXPERIENCE

Netcracker Technology

Bengaluru, India • Sep 2022 – Present

Software Engineer • Full-time

- **Project: B2B Self-Service Portal UI (Angular • TypeScript • NgRx • RxJS • HTML5 • CSS3 • Bootstrap • Playwright)**
- Architected a modular **Angular SPA** with **lazy-loaded** routes and **AuthGuard**, enhancing feature isolation and user experience.
- Implemented a smart product search using **NgRx** selectors, achieving sub-second catalog search results and increasing user engagement by 30%.
- Engineered an **NgRx** global state layer with **ngrx-store-localstorage** meta-reducers, eliminating redundant **API** re-fetches on page reload.

Junior Software Engineer • Full-time

- **Project: B2B Order Capture UI (Angular • TypeScript • NgRx • RxJS • HTML5 • CSS3 • LESS)**
- Developed a real-time **WebSocket** notification system with **RxJS**, enhancing multi-user collaboration on shared quotes without manual page refreshes.
- Created a centralized error-handling layer with **HttpNotificationInterceptor**, improving user experience by consistently surfacing **server-side** errors across **API** endpoints.
- Implemented OrderCaptureMFCComponent **micro-frontend** shell with dynamic property injection.
- Architected multi-session **NgRx** state, using **storageMetaReducer** to reduce session-recovery time to near-zero.

PROJECTS

Garuda – Real-Time Indian Stock Market Analytics Platform

Feb 2025 – Apr 2026

- Built an **Angular v21** + **Electron** desktop client with a custom **RxJS WebSocket** pipeline merging historical and live frames by time key, then rendering them on **TradingView** charts.
- Engineered a sub-second data pipeline processing ~1,500 binary packets/sec from **DhanHQ WebSocket** streams using **TypeScript DataView** decoders, **batch-flushing** decoded ticks to **TimescaleDB hypertables**.
- Reduced symbol search latency to under 20ms across a **100K-row** dataset using a **pg_trgm GIN** index combining prefix **ILIKE** ranking with **trigram** similarity scoring, refreshed via a **csv-parse**-driven table swap.
- Reduced infrastructure cost by architecting a single **Node.js**-compatible **Bun/Fastify v5** monolith running under 20% CPU and 500 MB RAM on a **Hetzner CX22**. [View](#)

EDUCATION

Bachelor of Engineering in Computer Science and Engineering

Mangalore Institute of Technology and Engineering • GPA: 7.93/10

Mangaluru, India • Aug 2018 – Jul 2022
