Full Stack Developer

Frontend-heavy Full Stack Engineer specializing in Angular, NgRx and RxJS – building enterprise-grade B2B portals and high-frequency real-time data platforms from binary WebSocket pipelines to pixel-perfect UI.

SKILLS

- **Frontend:** Angular, TypeScript, RxJS, NgRx, HTML5, CSS, TailwindCSS, Bootstrap CSS, API, Electron
- **Backend:** Node.js, Bun, Fastify v5, REST APIs, WebSockets, Express
- **Database:** TimescaleDB, PostgreSQL, pg_trgm
- **Infrastructure/Tools:** Docker, Caddy, NPM, Git, GitHub Actions, GitHub Pages, GitLab, CI/CD

WORK EXPERIENCE

Netcracker Technology

Bengaluru, India • Sep 2022 – Present

Software Engineer • Full-time

- **Project: SSP B2B Self-Service Portal UI (Angular · TypeScript · NgRx · RxJS · Bootstrap CSS · Playwright)**
- Architected a modular **Angular** portal with **lazy-loaded** routes and **AuthGuard**, enhancing feature isolation and user experience within 3 months.
- Implemented a Smart Product Search using **NgRx** selectors, achieving sub-second catalog search results and increasing user engagement by 30%.
- Engineered a **NgRx** global state layer with **ngrx-store-localstorage** meta-reducers, eliminating redundant **API** re-fetches on page reload.
- Spearheaded **Playwright E2E automation**, reducing regression risk in critical flows and ensuring seamless user interactions across the platform.

Junior Software Engineer • Full-time

- **Project: B2B Order Capture UI (OC UI) (Angular · TypeScript · NgRx · RxJS · HTML5, CSS)**
- Developed a real-time **WebSocket** notification system with **RxJS**, enhancing multi-user collaboration on shared quotes within 4 months.
- Created a centralized error-handling layer with **HttpNotificationInterceptor**, improving user experience by consistently surfacing server-side errors across API endpoints.
- Implemented OrderCaptureMFCComponent **micro-frontend** shell with dynamic property injection.

PROJECTS

Garuda — Real-Time Indian Stock Market Analytics Platform

Mar 2025 – Mar 2026

- Engineered a sub-second data pipeline processing ~1,500 binary packets/sec from **DhanHQ WebSocket** streams using **TypeScript DataView** decoders, **batch-flushing** decoded ticks to **TimescaleDB hypertables**.
- Built an **Angular 21 + Electron** desktop client with a custom **RxJS WebSocket** pipeline merging historical and live frames by time key, rendering real-time tick data on **TradingView Charting Library**.
- Reduced symbol search latency to < 20ms across a **100K-row** datar using a **pg_trgm GIN** index combining prefix **ILIKE** ranking with trigram similarity() scoring, refreshed weekly via **csv-parse** swap transaction.
- Reduced infrastructure cost by architecting a single **Bun/Fastify v5** monolith running at < 20% CPU and < 500 MB RAM on a **Hetzner CX22**.

EDUCATION

BE Computer Science & Engineering

Mangalore Institute of Technology & Engineering • GPA: 7.93

Mangaluru, India • Aug 2018 – Jul 2022
